BBC Studios

Project

The Roath Lock project is the BBC's latest major studio development, becoming a home to popular shows such as Casualty and Doctor Who.

The project client, BBC, desired a building that met the highest modern standards of sustainability without compromising on aesthetic appeal.

Thanks in no small part to Macrolux's multiwall polycarbonate solutions' incredible insulating properties, Roath Lock has become the first industrial building in the UK to achieve a BREEAM 'Outstanding' rating, on account of its superb environmental credentials.

Why Macrolux?

Macrolux's Titan product was the perfect choice for installer ACE Shelters, offering a canopy solution that is perfect for long projections (in this case up to 5.5m).

Fitted with Macrolux's multiwall polycarbonate sheeting for nearly unbreakable strength and long maintenance-free lifespan, the Titan range allows for an elegant finish achieved with year-round weather protection, sun protection and in-built quality.

Titan also allows for easy dismantling at the end of the building's life, as well as accommodating various wall lengths and projections.
