Roof vent adaptation

Project

Macrolux works with a number of major national glazing and conservatory businesses, and is always on hand to aid its customers with product development. As part of its commitment to customer satisfaction, Macrolux is dedicated to ensuring clients' lives are made easier and that their own customers are satisfied.

Macrolux took the initiative to further develop the design of its already-successful Skyport roof-vents, in order to increase the number of instances where it could be used in various applications in conservatory design with superior thermal breaking.

Why Macrolux?

Macrolux is constantly innovating new products and improving existent ones in order to anticipate customer requirements.

The redeveloped Skyport has been designed to offer improved thermal performance of the vent and further reduce condensation. Such was the success of this revised Skyport, it has now become the standard roof vent solution for many clients and Macrolux has now made this adapted product available across its whole customer base.
