Product(s)

Antares 40mm, self-supporting multiwall polycarbonate system

Charlestown Leisureplex

Project

The Charlestown Leisureplex project is the third phase of a multi-million Euro development that began with the Charlestown Shopping Centre. It has been designed to provide a host of leisure facilities to the Finglas area of North Dublin, including a nine screen cinema and a number of restaurants.

Its self-supporting properties and translucent nature means Macrolux's curtain walling product, Antares, is the perfect choice to provide a light and spacious environment to customers and visitors of the new complex, complementing the modern structure of this state-of-the-art build.

Why Macrolux?

Its unique self-supporting system, translucency and vertical application makes Antares the perfect product for this project. Designed, manufactured and distributed by Macrolux, its 40mm thickness and outstanding structural performance means it was the product of choice for this project.

Lightweight, durable and boasting critical weather resistance, it provides a practical and cost-effective alternative to glass – especially in projects such as this where a large-span area is required. Its insulating properties make it far more energy-efficient than glass while its translucency is crucial in emphasising the appearance of a light, spacious and attractive environment.
